TASK REPORT (10th March 2026) – DAY 14

- Downloaded dataset **'employee_data.csv'** from Kaggle.com
- It had **8 columns and 500 rows.**
- It includes **Index, employee_ID, age, department, is_manager, join_date, experience and salary** columns.
- Downloaded dataset was already **cleaned** only the data type of Join_date column was not correct.
- Converted its data type to **datetime** type.
- Created database **'SQL_Task_2'** in MySQL_Workbench.
- Imported dataset in the database in **'MySQL_Workbench'.**
- Written **MySQL** queries using **GROUP BY** and **AGGREGATIONS**.
- Also, on **Jupyter Notebook** using **pandas** performed same tasks of **GROUP BY** and **AGGREGATIONS.**
- The operations I have done are:
    1. Average salary by department.
    2. Total salary by department.
    3. Total number of employees in each department.
    4. Total number of employees.
    5. Average experience by department.
    6. Total number of managers.
    7. Minimum salary by department.
    8. Maximum salary by department.
- Completed today's task **'Group By & Aggregations'.**
