

## TASK REPORT (16<sup>th</sup> Feb 2026) – DAY 4

- Downloaded the Iris dataset from kaggle.com.
- It has **150 rows and 6 columns** with **5KB** size of the file.
- The column names are: Id, SepalLengthCm, SepalWidthCm, PetalLengthCm, PetalWidthCm, Species.
- Imported the dataset into Rstudio for R Language Programming.
- Verified the data types of columns, all columns had proper data types no needed to change.
- Checked for missing values, SepalLengthCm, SepalWidthCm, PetalLengthCm, PetalWidthCm columns has missing values.
- Missing values have been replaced with the median of that column.
- As the lengths and widths of Iris flowers can be same sometimes.
- Checked for duplicate values, no duplicate values found.
- Cleaned the dataset using R language.
- Completed today's task '**The R Language Challenge**'.
