TASK REPORT (19ᵗʰ Feb 2026) – DAY 6

- I have completed yesterday's task on the provided dataset.
- It had **1000 rows and 6 columns**.
- The column names are: Transaction_ID, Transaction_Date, Server_Timestamp, Store_Location, Sales_Amount, Currency.
- Imported the file in Jupyter Notebook to clean the dataset.
- The dataset had so much garabage values including encoding errors.
- As 'Transaction_Date' column had mixed date formats, converted to 'YYYY-MM-DD' format.
- 'Server_Timestamp' column had inappropriate time format with different timezones, it was converted to 'H-M-S' format and in only single timezone (UTC).
- 'Store_Location' columm had encoding error UTF-8 including Mojibake, it was converted to the original form using Fix Text for You (FTFY) library.
- Downloaded the cleaned xlxs file because csv file was not showing the store_location column cleaned.
- Completed yeasterday's task **'Encoding & Timezones'.**
